

		Light Urinary Incontinence Loss of a few drops of urine, sometimes even a small gush. For women this can be associated with coughing, laughing, sneezing or exercise. For men this means a loss of a few drops of urine which often occurs after urination.				Moderate Urinary Incontinence Small and sometimes larger gushes of urine. Do not always reach the toilet in time. Can have an urgent desire to pass urine.		Heavy Urinary and/ or Faecal Incontinence Pass large amounts of urine. Do not reach the toilet in time. No bladder control. Can also include bowel/ faecal incontinence.
